

Start recycling and start using paper bags!

Ways to do this!

- Start using paper bags so they decompose to and not trap animals
- Start recycling or use items more than once so less trash is used.
- Talk to family and friends about plastic pollution.

Sea Levels Are Rising

-and countries are disappearing!-

How are sea levels rising?

The planet is getting warmer and warmer and ice caps are melting under the heat. Then it results into putting the melted water in the seas causing them to rise.

How are countries disappearing?

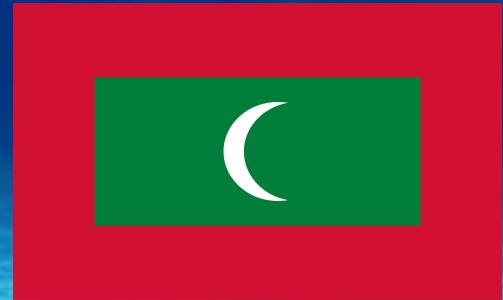

Many cities and countries such as the Maldives, will disappear because of the seas flooding their countries. They deal with flooding everyday because of sea level rise.

How are we endangering life with plastic?

The food chain

Is when we eat fish and they could have plastic in them so we are eating plastic

Plastic damage

can affect humans just as well as it affects animals.

Fish eat plastic

then when the fish start to digest it it can kill the fish.

Plastic is a pollution in the ocean

Every minute there is a equivalent of a garbage truck full of plastic going in the ocean.

Most animals mistake plastic for food each day and can seriously hurt themselves

100 Millions of fish, seabirds and other marine life get killed from plastic each year.
